ID Video

*The all-in-one solution for
integrated Access Control &
Video Surveillance system*

Key Features & Benefits

Tightly integrates with ACTA3 award winning ID Management Platform.

Combines benefits of Access Control, Time Attendance and Video Monitoring in one solution.

IP Web Based Technology allows surveillance from any location in the World with WAN connection.

Easy upgrade to any existing ACTAtek installation!

Monitor and view real-time ACTA3 Event Logs under the 2-D Map.

Administrator can pre-set the alerts event e.g. "DOOR IS OPEN". When the pre-set alert event happened, a blinking red color icon with alert beep sound will display on the 2-D Map to inform administrators.

Administrator can easily monitor and view the Event Logs ,and also playback the recorded Video clips by defining the search timing. e.g. +/- 10 secs of Event Logs.

Administrator also can view and compare the User Photos with the Snapshot Photos under ID Video Log.

MS SQL database technology.

ID Video

The all-in-one solution for integrated Access Control & Video Surveillance system

ID Video is an add-on application of Access Manager to seamlessly combine Access Control System (ACTA3) with Video Surveillance Management (IP Camera) in one platform. With ID Video, administrators can easily monitor the real-time ACTA3 Event Logs under the 2-D Map. Also by searching certain timing (+/- 10 secs) of Event Logs, administrators can just double click the Event Logs to playback the recorded Video clips under ID Video Log to help prevent the tail gating from happening.

When a user initiates an authentication from any of an ACTA3 unit (fingerprint, RFID smartcard or PIN) in the network, the video stream from the ACTA3 camera is time-stamped. The result is an application that shows the ACTA3 event log, CMOS camera image and a selectable video option to see the authentication event. Searches can be performed for specific ACTA3 units, ID logs, individuals, specific days, time and so on - all the security information required. These features allow Security Directors to review potential "tail-gating" where one authentication and door open event results in multiple entry.

ID Video compliments with ACTA3 and IP-based Reader

ACTA3

IP-based Reader

The application allows both 24/7 and motion detection operation. With Motion detection the user can limit the space to only events local to the ACTA3 units and doors that are monitored. 24/7 is continuous recording mode - suitable for situations where all continuous surveillance of the area is required.

System Overview

Video Event Log

2D Map Viewer with Real-time Event Logs Viewer of Terminals (ACTA3/ IP-based Reader)

Playback Video clip files linked with Event Logs
